

Brand & Web Style Sheet

Developer handoff for visual identity and digital implementation

Version 1.0 | 25 September 2026

Core expression

Premium, understated confidence. Disruptive in point of view, assured in execution, human in the way it works.

The visual system

Clear Rock Legal should feel modern and distinctive without looking like a generic SaaS brand or a traditional legal supplier. The wordmark stays calm and premium. The energy comes from confident copy, strong contrast, carefully chosen imagery and purposeful use of saffron.

Primary typeface	Inter
Primary dark	Olive Charcoal #293026
Primary light	Warm Ivory #F5F1E8
Primary accent	Saffron #D8A326
Supporting accents	Burnt Orange #C95E3F · Warm Taupe #978B80

Brand personality

- Disruptive - challenge unnecessary waiting and outdated delivery models.
- Assured - premium, technically credible and calm. Never loud for the sake of it.
- Human - users are involved early, senior people stay close, language is direct and understandable.

Visual principle

Keep the identity restrained. Let the proposition do the disrupting.

Avoid futuristic AI tropes, corporate blue, generic law imagery and decorative technology effects. Use the palette, typography and imagery with discipline.

Approved wordmark

Use the supplied artwork exactly. Do not retype, redraw or rebuild the wordmark from a font. The approved mark is the Precision Edit wordmark: the edited R in CLEAR, the solid-stem R in ROCK, and widely spaced LEGAL beneath.

PRIMARY - SAFFRON R ON LIGHT

Default website/header treatment on Warm Ivory or similarly quiet light backgrounds. This is the most distinctive expression and should be the first choice.

MONOCHROME OLIVE	WHITEOUT
 Formal documents, restrained contexts, or where the saffron accent is not appropriate.	 Dark Olive sections, footer, presentations or other dark brand surfaces.

Usage rules

- Keep clear space around the mark equal to at least the height of the word LEGAL.
- Recommended minimum digital width for the full lockup: 160 px. Use more space whenever available.
- Use only the three approved colourways supplied. Do not recolour individual letters or introduce gradients/shadows.
- Do not place the light logo over busy photography. Put it on a solid Olive Charcoal field or use a quiet crop with sufficient contrast.
- Do not alter spacing, proportions, letterforms or the relationship between CLEAR ROCK and LEGAL.

Developer note

The current supplied .svg files are image-based SVG containers with embedded raster artwork rather than fully path-based vector files. Use them as supplied for the website. If true-vector artwork is later required for large-format print, export/rebuild the approved mark as paths without changing its geometry.

Core palette

Warm Ivory and Olive Charcoal should dominate. Saffron is the primary accent. Burnt Orange is supporting only. Warm Taupe is structural, not a primary text colour.

OLIVE CHARCOAL	#293026	41, 48, 38	Primary text, dark sections, secondary CTA
WARM IVORY	#F5F1E8	245, 241, 232	Primary page background, calm surfaces
SAFFRON	#D8A326	216, 163, 38	Primary accent, CTA, rules, selected highlights
BURNT ORANGE	#C95E3F	201, 94, 63	Supporting accent only, sparing emphasis
WARM TAUPE	#978B80	151, 139, 128	Borders, metadata, quiet structure

Contrast and accessibility

Use the following pairings as the default for readable digital text:

- Olive Charcoal on Warm Ivory - excellent contrast for body copy and headings.
- Warm Ivory or white on Olive Charcoal - excellent contrast for dark sections and footer.
- Olive Charcoal on Saffron - AA-safe for normal text and ideal for the primary CTA.
- Burnt Orange and Warm Taupe are not suitable as small body text on Warm Ivory. Use them for rules, icons, large emphasis or non-text decoration.

Colour balance

Recommended page mix

Approximately 70-80% Warm Ivory / white, 15-20% Olive Charcoal, 5-10% Saffron. Burnt Orange and Warm Taupe should appear in smaller supporting doses.

Inter is the brand typeface

Use Inter across website copy, headings, navigation, buttons and product/UI examples. The wordmark is custom artwork and should never be recreated by typing CLEAR ROCK LEGAL in Inter.

Role	Weight	Size	Line height	Use
Display / H1	Inter Medium 500	56-88 px	0.98-1.05	Hero statements
H2	Inter Medium 500	40-56 px	1.05-1.12	Section headlines
H3	Inter SemiBold 600	24-32 px	1.15-1.25	Subsections, cards
Body large	Inter Regular 400	19-22 px	1.45-1.60	Lead copy
Body	Inter Regular 400	16-18 px	1.50-1.65	Primary reading text
Small / UI	Inter Medium 500	13-15 px	1.35-1.50	Navigation, labels, controls
Eyebrow	Inter SemiBold 600	11-13 px	1.2	Uppercase, 0.08-0.12em tracking

Typography behaviour

- Prefer sentence case. Avoid title case everywhere and avoid overusing all caps outside short eyebrow labels.
- Headlines should feel spacious and confident, not compressed. Use tight line height but generous space around blocks.
- Keep line lengths readable: roughly 55-75 characters for body copy.
- Do not introduce a second display typeface. The system is intentionally single-family.

SEE IT EARLY. EVOLVE IT TOGETHER.

Why wait to find out if it works?

Clear Rock gets case management systems working with your teams early, so you can see, use and evolve them together.

How the brand should behave on screen

The website should feel editorial and premium rather than dashboard-heavy. Use large moments of Warm Ivory, deliberate dark sections and clear product proof. Saffron should guide the eye rather than flood the page.

Core components

Primary CTA

Secondary CTA

Text / outline

See it working →

Talk to Clear Rock

Learn more →

Section treatments

Light section

Warm Ivory background, Olive text, Saffron accent.
This should be the default.

Dark section

Olive Charcoal background, Warm Ivory text,
Saffron for active emphasis.

Proof / product section

White or very light surface with real CMS UI, fine
Taupe borders and restrained annotation.

Layout guidance

- Content max-width: 1200-1280 px on large screens.
- Page gutters: 48-64 px desktop, 20-24 px mobile.
- Section spacing: 96-128 px desktop, 64-80 px mobile.
- Use a restrained corner radius: 4-8 px. Avoid pill-shaped buttons and excessive rounded cards.
- Let copy and imagery breathe. Avoid dense card grids unless the content genuinely requires them.

Visual storytelling

The strongest visual distinction is not "people + tech". It is the idea that customers should not have to wait months to see whether something works. Imagery should make that tension felt, then show the better experience.

Hero / H1	Conceptual pain or friction. Show unnecessary waiting, bottlenecks or outdated manual throughput in a way that makes the viewer think: "Why is this still being done like that?"
Product / H2	Actual CMS screens and real working configuration. Use legible, believable matter data and product UI, not AI-generated interface gibberish.
People / S3	Documentary collaboration. Real discussion, feedback, hands-on use and iteration. Avoid staged "three people looking at a laptop" stock clichés.
Experience / S4	Human credibility and battle scars. Senior people working through real problems, not heroic consultant poses.

Graphic devices

- Saffron rules, small blocks and directional markers can create rhythm. Use them deliberately, not decoratively.
- Fine Warm Taupe lines work for annotations, dividers and quiet framing.
- Use arrows only when they explain movement, sequence or a real next step. Avoid random slashes, chevrons or tech motifs.
- Do not use gradients, neon glows, circuit patterns, Matrix effects or generic AI imagery.

Image treatment

Prefer warm, natural photography with believable texture. Images can carry subtle warmth that sits comfortably with the Burnished palette, but avoid heavy filters that make everything orange. Product UI should remain neutral and clear.

Writing should sound like Clear Rock

Direct, human, assured. The writing should sound like people who have implemented and lived with these systems, not a consultancy brochure.

Prefer	Avoid
See it working.	AI-powered implementation transformation.
Gets case management systems working early.	Accelerates digital transformation.
Your teams use and evolve it with us.	Stakeholder-centric change enablement.
People do the judgement. Technology does the repetition.	Next-generation AI delivery ecosystem.

Developer asset map

Primary logo	CR Legal Saffron SVG.svg
Monochrome logo	CR Legal Olive Charcoal SVG.svg
Reversed logo	CR Legal White Out SVG.svg
Typeface	Inter - use webfont / local project dependency. Do not reconstruct the wordmark in Inter.
Brand tokens	Use the CSS variables supplied alongside this guide.

CSS tokens

```

  --crl-taupe: #978B80;
  --crl-white: #FFFFFF;
  --crl-font: "Inter", system-ui, -apple-system, sans-serif;
}
```

Final check before build

If a design decision makes the site feel more like generic legal tech, generic SaaS or generic consultancy marketing, simplify it. Clear Rock Legal should look premium and calm while the proposition, imagery and interaction carry the challenge.
